

FRUIT GRATING TOOL

ABSTRACT

5 A fruit grating tool includes a tube-shaped housing, a cap releasably
connected to the housing, a pressing member arranged under the cap and
biased down by a spring, a rotary member having a knob arranged on top
of the cap, and a grating base arranged under the pressing member and
connected to the rotary member; the grating base has a grating surface on
10 an upper side thereof, and many sharp edged tangential holes thereon;
fruits are put on the grating base to be pressed against the grating surface
by means of the pressing member, and are grated by means of the grating
surface when the knob is operated to cause the grating base to rotate; the
fruits will pass down via the sharp edged tangential holes of the grating
15 base after having been grated into small pieces.
